

Aqua-Hort and Cut Roses Roots

Left : untreated plant

Right : Aqua-Hort treated plant

Recently was a report send out on the trials with Aqua-Hort for cut roses in Kenya. Lisbeth Riis, the East Africa agent carried out the work in cooperation with the Harvest farm. In the report was demonstrated **the increased nutrition uptake and higher yields** by the Aqua-Hort treated plants.

Today (the 12th. of March 2008) examinations were made of the actual root development of the plants. The results indicate the reason for the better growth. As has been seen in many cases earlier, the Aqua-Hort treated plants develop bigger and more in number of the white roots than untreated plants.

A new trial round is being started up.

With regards
