

"A plant pot is just a plant pot?" Not with Pöppelmann TEKU®: discover TEKU® AddedValues.

Fast watering and drainage and optimum pot machine properties – these small details are often what makes a big difference. In other words: precision work. This is a decisive factor

for the quality of the plant pots in the MXC series. And it's the decisive factor for something else: your success.

How TEKU® AddedValues benefit you: **Better plants** – more than 30 years of horticultural experience. **Maximum efficiency** – the plastics technology know-how of Pöppelmann

engineers and production on modern high- performance machines. **Effective sustainability** – management of environmentally-friendly materials.

On the following pages you can learn more – discover the details of TEKU® AddedValues.

Multi hole profile bottom

- █ Contact surface/ring
- █ 1st level with direct base contact: drainage through sloped sections
- █ 2nd level with a distance of 1.5 mm to contact surface: optimum capillary drainage
- █ 3rd level with a distance of approx. 5 mm to contact surface: fast dripping drainage, maximum aeration
- █ 4th level with drainage openings on sloped sections (internal side slits)

Your advantages:

Complete and fast watering and drainage as well as aeration on four levels. For problem-free processing on conveyor belts, there are no mounting feet in the TEKU® MXC-series.

Pot rond sputgiet 6 graden MXC

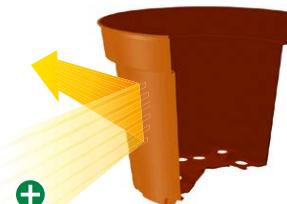

Better Plants.

Reduced cultivation time

The multi hole star bottom ensures rapid growth and healthy plants with ideal watering and drainage.

Optimal root growth

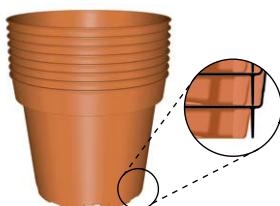

No need for internal stacking lifts – allows optimal root growth.

Very low failure rates

Roots are not adversely affected or damaged by exposure to light.

Maximum Efficiency.

Easily stacked

Pots are stacked using the cross on the bottom and not internal stacking lifts.

Easy denesting from the stack

Pronounced shoulder indents and a high degree of lateral stability ensure easy denesting from the stack in the pot magazine.

Maximum stability

With no mounting feet, the pots are more stable on conveyor belts.

Better handling

Pronounced pot shoulders for modern automatic pot handling machines.

Reduced transport costs

The optimal diameter and improved fit increase loading quota per CC container.

Effective Sustainability.

Use of recycled materials

Careful preparation and intensive use of recycled plastics.

Reduced weight

Unrivalled low materials usage thanks to continuous design optimisation.
