

Pure Chlorine Unit 50 gram

Tuinbou 技术
& -benodigdheden

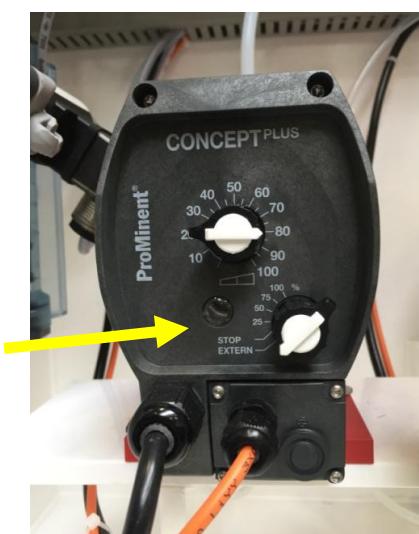

Instruction summer stop

To take the Pure Chlorine Unit 50 gram unit out of production for a longer period, we advice to make the unit free from chlorine. There for follow the next instruction; Stop the unit by pressing the STOP/START button in the screen, the text "USER STOP" will appear.

In this mode the water reservoir will be circulating without the production of chlorine. For this reason the reservoir will be free of chlorine in a short time. In this mode the brine pump can be set on 100% to flush the anode. Leave the unit for 15 minutes in this mode.

Put the brine pump on external position afterwards. Now the main power can be shut down . When the unit Will be in operation again, the STOP/START button can be pushed only and the unit will start production again.
